

2027 OPERATIONS REPORT

A realistic fixture for deterministic structure testing

Prepared for internal architecture verification

1. Introduction

This report documents the operating context for the 2027 planning cycle.

The source text remains authoritative; structural nodes reference it by block ID.

No sentence on this page is summarized, paraphrased, or rewritten.

Operating context

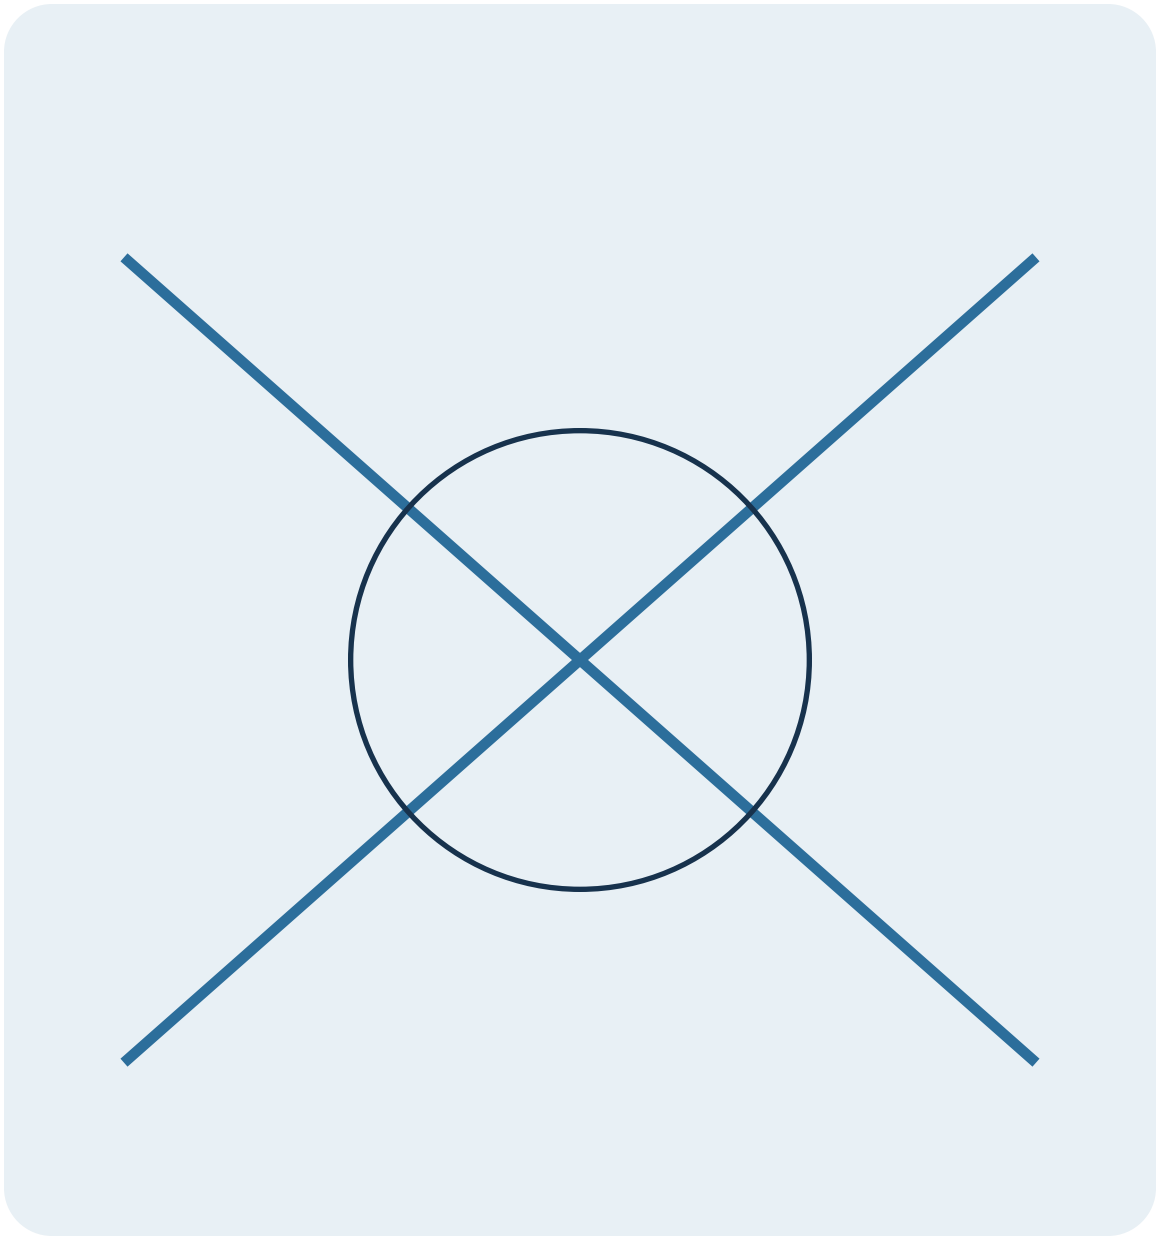

This page continues the introduction without a numbered heading signal.

The interpreter should retain it under Section 1 across the page boundary.

Adjacency alone is not the signal: the active numbered section is the anchor.

1.1 Purpose

The fixture verifies nested hierarchy, stable IDs, and exact source provenance.
A subsection is accepted only after its complete parent numbering prefix exists.

2. Findings

The deterministic hierarchy should close Section 1 before opening Section 2.

The visual-only fifth page remains represented through page routing metadata.

All native-text blocks must be owned exactly once in canonical source order.
